New York

# Contents

<b>List of Tables</b>	xii
<b>Preface to the Second Edition</b>	xiii
<b>Preface to the First Edition</b>	xv
<b>Acknowledgments</b>	xvii
<b>How to Use This Book</b>	xix
<b>1 Calculus review. Options. Put–Call parity.</b>	1
1.1 Brief review of differentiation . . . . .	1
1.2 Brief review of integration . . . . .	3
1.3 Differentiating definite integrals . . . . .	6
1.4 Limits . . . . .	8
1.5 L'Hôpital's rule . . . . .	10
1.6 Multivariable functions . . . . .	11
1.6.1 Functions of two variables . . . . .	13
1.7 Plain vanilla European call and put options . . . . .	16
1.8 Arbitrage-free pricing . . . . .	17
1.9 The Put–Call parity for European options . . . . .	19
1.9.1 Arbitrage opportunities . . . . .	20
1.10 Forward and futures contracts . . . . .	23
1.10.1 Forward contracts and the Put–Call parity . . . . .	25
1.11 References . . . . .	26
1.12 Exercises . . . . .	27
<b>2 Numerical integration. Interest Rates. Bonds.</b>	35
2.1 Improper integrals . . . . .	35
2.2 Differentiating improper integrals . . . . .	39
2.3 Midpoint, Trapezoidal, and Simpson's rules . . . . .	39
2.4 Convergence of numerical integration methods . . . . .	43

2.4.1	Implementation of numerical integration methods . . . . .	45
2.4.2	A concrete example . . . . .	48
2.5	Interest Rate Curves . . . . .	51
2.5.1	Constant interest rates . . . . .	52
2.5.2	Forward rates . . . . .	53
2.6	Bonds. Yield of a bond . . . . .	54
2.7	Bond duration and convexity . . . . .	57
2.8	Discretely compounded interest . . . . .	59
2.9	Zero coupon bonds . . . . .	64
2.10	Numerical implementation of bond mathematics . . . . .	65
2.11	References . . . . .	70
2.12	Exercises . . . . .	71
<b>3</b>	<b>Probability concepts. Black–Scholes formula. Greeks and hedging.</b>	<b>75</b>
3.1	Discrete probability concepts . . . . .	75
3.2	Continuous probability concepts . . . . .	77
3.2.1	Variance, covariance, and correlation . . . . .	80
3.3	The standard normal variable . . . . .	84
3.4	Normal random variables . . . . .	86
3.5	The Black–Scholes formula . . . . .	89
3.6	The Greeks of European options . . . . .	92
3.6.1	Explaining the magic of Greeks computations . . . . .	94
3.7	Implied volatility . . . . .	97
3.8	The concept of hedging. $\Delta$ – and $\Gamma$ –hedging . . . . .	99
3.9	Implementation of the Black–Scholes formula . . . . .	103
3.10	References . . . . .	104
3.11	Exercises . . . . .	106
<b>4</b>	<b>Lognormal variables. Risk–neutral valuation.</b>	<b>113</b>
4.1	Change of pdfs for functions of random variables . . . . .	113
4.2	Lognormal random variables . . . . .	115
4.3	Independent random variables . . . . .	117
4.3.1	Independent normal random variables . . . . .	119
4.3.2	Independent lognormal random variables . . . . .	121
4.4	The lognormal model for asset prices . . . . .	123
4.5	Risk–neutral derivation of Black–Scholes . . . . .	124
4.6	Probability that options expire in–the–money . . . . .	128
4.7	Financial interpretation of $N(d_1)$ and $N(d_2)$ . . . . .	129

4.8	References . . . . .	130
4.9	Exercises . . . . .	131
<b>5</b>	<b>Newton's method. Implied volatility. Bootstrapping.</b>	<b>135</b>
5.1	Numerical methods for nonlinear problems . . . . .	135
5.1.1	Bisection Method . . . . .	135
5.1.2	Newton's Method . . . . .	138
5.1.3	Secant Method . . . . .	142
5.2	Numerical methods for $N$ -dimensional problems . . . . .	144
5.2.1	The $N$ -dimensional Newton's Method . . . . .	144
5.2.2	The Approximate Newton's Method . . . . .	146
5.3	Computing bond yields . . . . .	149
5.4	Implied volatility . . . . .	151
5.5	Bootstrapping for finding zero rate curves . . . . .	153
5.6	References . . . . .	156
5.7	Exercises . . . . .	157
<b>6</b>	<b>Taylor's formula. Taylor series. Bond portfolio optimization.</b>	
	<b>ATM approximations of Black–Scholes formulas.</b>	<b>161</b>
6.1	Taylor's formula for functions of one variable . . . . .	161
6.2	Taylor's formula for multivariable functions . . . . .	164
6.2.1	Taylor's formula for functions of two variables . . . . .	166
6.3	Taylor series expansions . . . . .	168
6.3.1	Examples of Taylor series expansions . . . . .	171
6.4	Percentage and log returns . . . . .	174
6.4.1	Asset returns and portfolio returns . . . . .	176
6.5	Parallel shifts in the yield curve . . . . .	179
6.6	Connections between duration and convexity . . . . .	181
6.7	Dollar duration and dollar convexity . . . . .	183
6.7.1	DV01 . . . . .	186
6.7.2	Bond portfolio immunization . . . . .	187
6.8	Black–Scholes formula: ATM approximations . . . . .	189
6.8.1	Several ATM approximations formulas . . . . .	189
6.8.2	Deriving the ATM approximations formulas . . . . .	190
6.8.3	The precision of the ATM approximation of the Black–Scholes formula . . . . .	194
6.9	Greeks and Taylor's formula . . . . .	197
6.10	References . . . . .	199
6.11	Exercises . . . . .	200

<b>7 Finite Differences. Black–Scholes PDE.</b>	<b>207</b>
7.1 Forward, backward, central finite differences . . . . .	207
7.2 Finite difference solutions of ODEs . . . . .	210
7.3 Finite difference approximations of the Greeks . . . . .	220
7.3.1 Numerical accuracy of the finite difference approximations of the Greeks . . . . .	222
7.4 The Black–Scholes PDE . . . . .	226
7.4.1 Financial interpretation of the Black–Scholes PDE . . . . .	228
7.4.2 The Black–Scholes PDE and the Greeks . . . . .	228
7.5 References . . . . .	231
7.6 Exercises . . . . .	232
<b>8 Multivariable calculus: chain rule, double integrals, extremum points. Optimality of early exercise.</b>	<b>237</b>
8.1 Chain rule for functions of several variables . . . . .	237
8.2 Double integrals . . . . .	239
8.3 Change of variables for double integrals . . . . .	242
8.3.1 Change of variables to polar coordinates . . . . .	244
8.4 Relative extrema of multivariable functions . . . . .	245
8.5 The Theta of a derivative security . . . . .	252
8.6 Integrating the density function of $Z$ . . . . .	254
8.7 The Box–Muller method . . . . .	256
8.8 The Black–Scholes PDE and the heat equation . . . . .	257
8.9 Barrier options . . . . .	261
8.10 Optimality of early exercise . . . . .	263
8.11 References . . . . .	265
8.12 Exercises . . . . .	266
<b>9 Lagrange multipliers. Portfolio optimization.</b>	<b>271</b>
9.1 Lagrange multipliers . . . . .	271
9.1.1 Examples . . . . .	279
9.2 Optimal investment portfolios . . . . .	282
9.3 Minimum variance portfolios . . . . .	283
9.4 Maximum return portfolios . . . . .	287
9.5 References . . . . .	291
9.6 Exercises . . . . .	293
<b>10 Mathematical Appendix</b>	<b>295</b>
10.1 Even and odd functions . . . . .	295

10.2 Polynomial interpolation . . . . .	297
10.3 Useful sums with interesting proofs . . . . .	298
10.3.1 Sums of the form $\sum_{k=1}^n k^i$ . . . . .	298
10.3.2 Sums of the form $\sum_{k=1}^n k^j x^k$ . . . . .	301
10.4 Sequences satisfying linear recursions . . . . .	304
10.5 The “Big O” and “little o” notations . . . . .	308
10.6 Power series . . . . .	310
10.7 Stirling’s formula . . . . .	313
10.8 Convergence results for Taylor expansions . . . . .	314
10.9 References . . . . .	318
10.10 Exercises . . . . .	319
<b>Bibliography</b>	<b>325</b>
<b>Index</b>	<b>329</b>
